The CDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSPNO714). The LRSP sequence basi chistidine-rich protein (AAY94528). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful for diagnosis of the above disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20
                                                                                                                                                                                          The present invention relates to human lysine-rich statherin protein (LRSP)(AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumnour tissue (BRSTNOT14). The LRSP sequence was found to have homology with human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Precipitation of calcium phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, aleukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful
                                                                                                                                                            Sequence
                                                                                                                   o

immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antiinflammator; antibacterial; antiviral; antiingal; antirhermatic; antiinflammatory; antibacterial; antiviral; antifungal; antirhermatic; antithyroid; and antianaemic. The sequences can be used for determining pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autolumnune disorders, asthma,
                                                                                                                                                                                                                                                                 AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31-MAR-1999;

                                         The present sequence represents an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for detecting Enterococcus nucleic acids.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of a number of polypeptides from Enterococcus faecalis. The proteins can be used as vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. faecalis. The polynucleotide is also useful for preventing or treating E. faecalis infection. The present sequence is a protein of the invention.

They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus antibodies in a sample. The nucleotide Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of polypeptides from Enterococcus faecalis. The proteins can be used as vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. faecalis. The polynucleotide is also useful for preventing or treating E. faecalis infection. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to identifying modulators of receptor activity CC cusing orthologues of human receptors by contacting a compound with CC receptors from two species, and measuring the effect of the compound on CC cucleotide sequence encoding bradykinin B1 receptor (II); or encoding a CC CXCR2 receptor (III). The method is useful for identifying a compound CC in two different species. The method is useful for identifying a non-CC receptor modulators. The method is useful for identifying a non-CC receptor modulators. The method is useful for identifying a non-CC receptor modulators. The method comprises contacting a test compound with CC on the receptors; and selecting an animal model for teast two species; measuring an effect of the compound CC antagonist, suppressor, inhibitor and inducer, useful in treatment of CC antagonist, suppressor, inhibitor and inducer, useful in treatment of CC pain and inflammation and other receptor related pathologies. AAU80476-CC pain and inflammation and other receptor related pathologies. AAU80476-CC having a represent bradykinin l and CXCR2 receptor amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Percent Similarity:

C oligonuclectide (AAG)0015). This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-C coupled receptors. After tertiary screening, six plaques were isolated. The insert of one of these plaques, termed F3R was of 2.5 C kb in size. This insert was sequenced. The protein deduced from C c-protein coupled receptors. The deduced protein sequence indicates seven putatuve transmembrane segments. A human created leukocyte lambda gtll cDNA library (5' stretch) was conserved with a 652 bp EcoRI/BamHI fragment (including nucleotides several human clones which hybridized to the rabbit IL-8 probe were isolated. The insert of one such clone, termed 4AB was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAR28273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 9

(A) are used for the diagnosis of tumors (especially colorectal CC or prostatic), organ rejection, inflammation and autoimmune diseases. CC also inhibitors of (I) are used therapeutically against tumors (and their CC inflammation), or autoimmune diseases (rheumatoid arthritis or throng bewell ce where the (cardio)vascular, lymphatic, respiratory, nervous, digestive, CC marrow diseases. The products of the invention are affected, and bone CC marrow diseases. The products of the invention are chemokine derivatives cimunosuppressive, dermatological, antirheumatic, antiarthritic. CC Chemokines act on specific tumor and inflammatory cells through a constellation of chemokine receptors (CR), which control migration and CC constellation of these cells. AAG80045-AAG80128 represent human chemokine ax

The invention relates to single nucleotide polymorphisms in the human C interleukin 8 receptor beta (IL8RB) gene. A method for haplotyping the CC IL8RB gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the IL8RB haplotypes given in the copies of the gene is defined by one of the IL8RB haplotypes given in the CC plant in the copies of the gene is defined by one of the IL8RB haplotypes given in the CC an be assigned to specific genotyping, whereby all possible haplotype pairs of this method is useful in genotyping, whereby all possible haplotype pairs in the frequency of the haplotype or haplotype pair of the IL8RB gene can be identified by comparing the frequency of the haplotype or haplotype or haplotype pair in a reference population, where a higher haplotype or frequency in the trait population, where a higher haplotype for studying the expression and function of IL8RB, for use in screening the sequences are also useful for studying the inflammatory disease related to IL8RB activity, such as the sequences are also useful for studying the effect of variation on the binding affinity of candidate drugs targeting IL8RB, millar on the binding affinity of candidate drugs targeting IL8RB. This sequence represents the ILRRB.

                                                                                                                                                                                                                                                                         Query Match:
                                                                                                                                                                                                                                                                                                                                                                        CC (Plasmodium falciparum) peptide (capable of binding to a red blood cell (RBC)) and a receptor peptide are claimed. AAR70103-25 are examples of these hybrid peptides. AAR70124 is a fusion of interleukin 8 receptor CC type 2 and glycophorin binding protein (GBP) 130. The use-of cytokine creceptors not normally found on RBCs means that the cytokine can bind comples to the RBC without deleterious effect. The RBC protects the CC hindrance prevents the cytokines binding to a receptor in another cell. CC GBP 130 or GBPH (GBP homologue) are the prefd. malaria parasite peptides company, others include EBA 175 (175 kba erythrocyte binding antigen), cc used, others include EBA 175 (175 kba erythrocyte binding antigen), cc receptor molecule (eg. exhibited by Plasmodium vivax). These peptides company, found on the surface of RBCs. The hybrid peptides are thus used to lower the levels of free cytokines in the circulation to reduce pathological

The SDFs are promoters, structural genes, untranslated regions (UTRs), or 3' termination sequences. They can be target gene, either as a promoter, a structural gene, an UTR or as a remination sequence. They are also useful as tools for genetic as a promoter, a structural gene, an UTR or as a mapping, and identification of a particular individual plant or for clustering a group pf plants with a common trait. AAA78433 to AAA78630 polynucleotide sequences and polypeptides encoded by them given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1073 AACTGGCTGATAAGGCTCTTTGGTATAAAAGCAATATCCAGAAATAAGATAATTAACTTT 1014

The SDEs are promoters, structural genes, andidopsis thaliana. The SDEs are promoters, structural genes, untranslated regions (UTRs), or 3' termination sequences. They can be used for expressing a gene product and controlling expression of a used for expressing a gene product and controlling expression of a sare promoter, as tructural gene, either as a promoter, a structural gene, and UTR or as a mapping, and identification of a particular individual plant or for clustering a group pf plants with a common trait. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
